SO WHAT, IF I AM SHORT!?

MANAGEMENT OF SHORT CLINICAL CROWNS

Fixed prosthodontics is what we generally recommend for treatment, restoration and management of tooth loss. Short clinical crowns are a common challenge faced by the clinician while executing the rehabilitation. Longevity of any restoration depends on proper diagnosis matched with skillful and precise implementation of principles of design.

This presentation focuses on the challenges presented by short clinical crowns, the diagnosis and treatment options, and the various factors that have to be considered during preparation and restoration of the compromised teeth.

ABOUT SPEAKER
